### **MaxVision® Announces Rugged Stimulus Package Promotion**

#### **Rugged Portable Computer Manufacturer Offers Stimulus Program**

**Huntsville, AL, April 16, 2009** – MaxVision LLC unveiled a Stimulus Package to help military, first responders and other customers lower their costs toward purchases of advanced, rugged computers for video encoding, geospatial analysis and other ‘extreme environment’ deployments. MaxVision specializes in the development and manufacturing of the fastest rugged portable computers in the industry, enabling them to operate in 0 - 50° Celsius temperature ranges, handle transportation shocks or drops and eliminate dust or fine desert sand intrusions.

“We know our customers have increased demands for the highest performance, rugged computer workstations and servers, even though the economic downturn has affected their ability to procure them,” stated Bruce Imsand, MaxVision’s founder and CEO. “But many Federal and State government entities don’t benefit from the stimulus and budget packages created.”

The MaxVision Stimulus Package is available to customers that order and receive product between April 16, 2009 and June 30, 2009. Other restrictions apply. Details about the MaxVision stimulus package can be viewed at [www.MaxVision.com/stimulus](http://www.MaxVision.com/stimulus).

#### **About MaxVision**

Founded in 1993, MaxVision manufactures rugged, portable and transportable servers, workstations and accessories with no compromises in performance. MaxVision patent-pending designs provide extensive customization, including advanced air filtration systems, advanced power conditioning, and certified tolerance for extended runtime within 0 - 50 degrees Celsius (32 - 122 degrees Fahrenheit).
